Mechanical and chemical management work to be completed on the property will be performed by a trained crew contracted through the Community Action Duluth Stream Corps (CADSC). All crew members will utilize brush saws and hand trimmers and must comply with all personal protective equipment requirements for use of the designated equipment by both Community Action Duluth Stream Corps procedures. Mechanical management will be completed each year between late winter and early summer, consistent with the dates authorized by the DNR permit. The CADSC crew will be cutting down dead Phragmites plant growth from previous growing seasons. All plant material will remain on site after trimming with no material being transported or removed from the designated work site. St. Louis River Alliance staff will be responsible for coordinating land access with property management, facilitating communication between the Stream Corps field crew leader and property

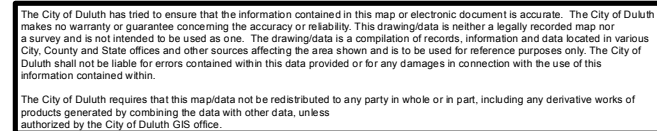

management, and ensuring that the parameters of the Invasive Aquatic Plant Management Permit issued to the City of Duluth from the Minnesota Department of Natural Resources are carried out correctly. St. Louis River Alliance staff will not directly perform mechanical management in the field and are responsible for the work completed through contract with CADSC.

Chemical management work to be completed on the properties will be performed by a trained crew using imazapyr-based herbicide "Habitat" which is approved for use near or above aquatic habitats. All crewmembers will utilize personal protective equipment designated by the CCMI coordinator including skin and eye protection as well as chemical resistant gloves. Herbicide will be applied using the hand-wicking method for direct application of the chemical to the target plant species in areas where the Phragmites stands are sparse or near areas of human activity such as boat launches or marinas. In areas closed to the public or inaccessible via trail, road, or walking path, the crew will utilize sprayers to efficiently apply the chemical. All chemicals will be stored according to label requirements and mixed off-site at a designated location approved for mixing. During application with sprayers, Imazapyr will be diluted down to a concentration of 1-1.5% and during hand-wicking application it will be diluted down to a concentration of 10%. Full strength chemicals will never be present in the environment. In 2018, chemical management will begin the week of April 16, and all other dates for additional chemical management will occur in the late summer and early fall months after the DNR permit is issued. Each location will be treated one time during the treatment period unless the crew, based on plant regrowth, recommends reapplication. Community Action Duluth staff will be responsible for coordinating land access with property management, facilitating communication between the field crew leader and property management/owners, and ensuring that the parameters of the Invasive Aquatic Plant Management Permit issued to the City of Duluth from the Minnesota Department of Natural Resources are carried out correctly.

Sincerely,

Brandon Van Tassel
Project Manager
