

treatment needs of those loads. The District then issues a document called a wastewater treatment capacity allocation permit to allocate the capacity to each of its user jurisdictions which the users are required to sign off on. Once approved, the Permit serves as a basis for allocation the operating and capital costs of the District to the users. The Permit amount also serves as a ceiling for any user's effluent flow into the system. A copy of the WLSSD ordinance establishing the permitting and charging system is attached.

The Permit and the allocation system are technical in nature and are most appropriately handled at the administrative level. The purpose of this ordinance would be to empower the director of public works and utilities to perform the necessary technical analysis and to sign off on the Permit, subject to review by council and its ability to give direction if deemed necessary.
